Environmental inequities

Loss of biodiversity

Manufacturing and refining pollution

Deviations of vegetation

Removal of species

Wastewater

Radioactive contamination

Carcinogenesis of soil

Acid rock drainage

Sound pollution

Sludge water

Oil spills

Microplastic pollution

Hazardous and toxic industrial waste

Soil contamination

Toxic electronic waste

Induced seismicity

Erosion

Great-scale manipulation of the planetary environment

"The spreading of geogenetics must be slowed not just into the future, but into the past as well, thereby saving almost countless lives amongst species"

—Holly Butt (2018)

Ocean dead zones

Changing rain and wind patterns

Loss of marine biodiversity

Island nations underwater

Coral reef die off

Permafrost thaw

Climate migrations

Glaciers running out of water

Extreme weather

Heat waves

Rising ocean levels

Melting polar caps

Ocean acidification

Polar amplification

Sea temperature increase

▲ Nile dam dispute

Ethiopia, Sudan, and Egypt were threatened with the loss of their long spanning tear of a regional water way

▲ Deepwater Horizon oil spill

An immense release of barrels of oil into the Gulf of Mexico, 2010

▲ Great Pacific Garbage Patch

Microscopic pollution

▲ Ocean microplastics

▲ Geo-experimentation

● Solar geoengineering

● Carbon removal

● Ocean alkalization and upwelling

● Cloud manipulation

▲ Water wars

▲ In 2020 the privatization of water was a billion-dollar issue in the Caribbean water wars

▲ Privatization of water

The History of Race Science

18th Century

Phrenology

Measuring intelligence in children

Phrenology: the brain is divided into different areas, each responsible for a specific mental function. The size of these areas determines the individual's intelligence and personality.

Fingerprints

Identifying individuals by their fingerprints

19th Century

Anthropometry for racial classification

Measuring physical characteristics to classify races

Criminal Anthropology

Identifying repeat offenders

20th Century

Physical Anthropology

Identifying repeat offenders

Scientific racism

Pseudoscientific belief in biologically determined racial hierarchies

Physiognomy

Identifying individuals by their facial features

21st Century

Genetics

Identifying individuals by their DNA

22nd Century

Biotechnology

Identifying individuals by their facial features

[illegible]

Space exploration

The first astronomical tools were
invented long before the telescope.
Dark constellations were identified
and named. The first astronomical
constellation was the legend of
Orion, the Hunter, the Hunter.

Radio telescope

The first astronomical radio
telescope was built in 1937.
It was a radio telescope.
It was a radio telescope.

Big Bang theory

The Big Bang theory is the
most widely accepted model
for the origin and evolution
of the universe.

Relativity

Albert Einstein's theory of
relativity is the most widely
accepted model for the origin
and evolution of the universe.

HRD

The Hertzsprung-Russell
Diagram (HRD) is a plot of
the absolute magnitude of
stars versus their surface
temperature.

Dwarves

The Dwarf galaxies are the
smallest galaxies in the
universe.

Giants

The Giant galaxies are the
largest galaxies in the
universe.

Galaxies

The Galaxy is a system of
stars, gas, and dust held
together by gravity.

Spectrograph

The Spectrograph is a device
that splits light into its
component colors.

Spectrography

The Spectrography is the
study of the spectrum of
light.

+B CONTROL AND CLASSIFICATION
